ABOUT

I have spent most of my time growing within the logistics industry, building computers on assembly lines, logistics coordinator assistance monitored, tracked goods into the warehouse and worked in the quality assurance department by improving damage product by 82%.

While at Nashville Software School, I was given real-world problems and asked to create solutions as both individual and team-based projects. Being at the school has effectively allowed me to be a part of an environment where I can have confidence in learning new technologies, help me grow, give back to my community and learn to be a good asset to teams by motivating and positively striving to reach goals.

PROJECTS

REACT CAPSTONE *PartShortage*
https://github.com/AliAbdulle/partShortage

The problem I solved was a warehouse management system that focuses to track activities of their employees and eliminate unnecessary inventory which would us wasting space and cost us a lot of money.

In addition of that, I decided to create three different departments and have different strict access level. I also created JSON file to store data when user added product, and made other departments available to use. My web application have a full CRUD application, an authentication, and cascade style sheet .

SKILLS

Language: C#, SQL, HTML, CSS, JavaScript, ASP.Net, React

WORK EXPERIENCE

Nashville Software School
Nashville, TN | Feb 18, 2019

- Creating CRUD functionality using vanilla JavaScript and React.js
- Working with team using communication channel such as Git/GitHub
- Real world problem solving and team dynamics taught through group and individual projects
- Using Javascript, React, HTML, CSS and other libraries to build single page applications
- Used external API to build dynamic single-page website

Group Projects:
Celebrity Tribute-HTML | Welcome to Nashville-Javascript | Nutshell-react and Nutshell-JavaScript

Working in a team environment was a great learning skill for me. In each of the group projects, I was solely responsible for certain components, which has helped me to greatly grow my professional skills. For the Nutshell-React group project, my role was to build the component that allows the user to create, read, update, and delete events from their user profile. For the Nutshell-JavaScript project, I collaborated with a team of four. My role was to build the task component which would allow the user to create, read, update and delete their personal tasks, and store their data to a JSON file . We communicated through gitHub by using pull requests, which required at least two approvals from our team members before merging to master. We were able to finish both projects, free of error, and on time. I am so proud have been a part these teams.

CEVA LOGISTICS
Senior Quality Assurance Auditor / Inventory Receiving
Mt. Juliet, TN | 2010-2019
